

Full Time Position for 2017:

The [Community Birth Program](#) in Surrey is actively recruiting one full-time midwife to start February 2017. The right candidate can start part-time and evolve to full time if needed to transition from a current practice. Our goal is to hire for long-term work.

We invite you to join our collaborative team to provide maternity care to families in Surrey/White Rock/Delta/Langley, TriCities, Aldergrove, Abbotsford, and Chilliwack - an ethnically, culturally and socially diverse population including new Canadians and refugees, First Nations, and teens from the Surrey Youth Clinic. We are a referral site for many Fraser Health programs as well as many family physicians who do not provide intrapartum care.

We are a full-service clinic providing preconception care, infertility treatment, midwifery care, contraceptive options including IUD, and naturopathic family care - well baby and well woman care.

Our program has been running since April 2012 and average 40+ EDDs per month. We attend deliveries at Surrey Memorial Hospital, a tertiary care facility with over 4200 deliveries per year. We have a close working & supportive relationship with our consulting OBs and pediatricians as well as subspecialist MFM, internal medicine, and endocrinologists. We have great nursing support.

We have an **on-call room** at the hospital for our team with a bed, computer, private bathroom, access to Wi-Fi (if you have UBC CWL login), and physician lounge with TV/kitchenette. This means you don't have to live within Surrey to work with our group. Our team uses OSCAR EMR for seamless charting and team communication.

Our goal is to provide a model of care that is woman-centred but also supportive of work-life balance for the providers with on-call shifts of 12-24 hrs.

We offer Connecting Pregnancy Group or individual prenatal appointments. Families have found the group prenatal visits rewarding and beneficial well beyond the prenatal period - connecting their lives with other families well after they have completed prenatal care with our program.
